

## Brad Owen

Hi everyone, I would like to start with a safety moment. Covid has been front and center over the last few months and as a small village we need to continue to be diligent. Please follow provincial guidelines to protect ourselves as well as those at increased risk.

As you are aware, we have an election coming up to select a new mayor and council. I think it is great that we have enough residents interested in serving the community to have an election. As voters you have a tough decision to make as I feel all

candidates have something to offer. I am seeking re-election for village council having just completed my first four-year term and would like the opportunity to serve again.

I would like to take this opportunity to tell you about myself and hopefully earn your vote. I grew up in Kenaston and moved away after high school to continue my education. During this time, I met my wife Tammy and we had two children, Ethan and Denedan. Our family moved back to Kenaston about 12 years ago. Professionally, I am a mechanical engineering technologist and have been working for Cameco Corporation for 14 years. My current role in the company is as a Reliability Technologist focused on industrial lubrication best practices and project management. I have earned the following professional designations during my work history.

- A. Sc. T. – Applied Science Technologist in Saskatchewan
- MMP – Maintenance Management Professional from PEMAC (Asset Management Association of Canada)
- MLE – Machine Lubrication Engineer from International Council of Machine Lubrication

As you can see, I have a strong background in maintenance and reliability, this is the experience I hope to continue to bring to our village to help with maintaining, managing, and improving our infrastructure and assets.

In the community I am currently involved with the fire department serving as Fire Chief for the Kenaston Rural Fire District and as a medical first responder. I am also active on the swimming pool board and help to operate and maintain the pool during the summer.

Thank you for your time, and please come out and vote!
